PRODUCT BOOK

Loftsails 2019

Wind vision is the turbine, and the turbine turns...

The Loftsails team and I are stoked to present Loftsails 2019 collection. Pascal, Diony, Fernando, Ramon, Serena, Devis, Curro, Erik, Maelle, Rob, Andrea: passionate windsurfers dedicated to creating "performance that is greater than the sum of the parts".

Working with Loftsails teamriders from each discipline, all designs are updated for 2019. Performance advancements have primarily been realized through tuning the curves that shape sail profile. 2019 batten profiles have also evolved to compliment profile development. New Loftsails 2019 design elements combine to animate your windsurfing experience.

Loftsails 2019 is not a revolution, rather a methodical development of windsurf sail designs for improved performance and usability. Luff curves, vertical shapes, horizontal curves... all critical parameters have been fine-tuned. Our pro-riders have worked together to intensively evaluate designs and confirm design evolution. Loftsails evolution is wind vision.

"Windsurf rig development has been my life, my fascination, for 40+ years... Dedication and passion are designed into Loftsails. Enjoy your windsurfing.

Which design parameters and constructions have been updated for the different 2019 ranges?

Loftsails Switchblade, Skyscape, Oxygen, Airscape, Wavescape and Pure Lip designs are all improved for 2019 with new luff curves and vertical shape schedules. The design updates improve these sails' relationship with the wind... Slightly softer leech allowing for easier pumping and better low-end power. More harmonic profiles add stability and control at the upper end. These improvements are not a revolution, but they are significant improvements to our established designs that make the windsurfing experience easier and more enjoyable.

Loftsails use more 2mil triax x-ply material in the updated ranges, this drops the weight of the 2019 designs.

We also worked to improve the 2019 batten systems for all sail lines. The new batten tip profiles are thinner, making the batten profiles more forward oriented, which shifts the sail shape forward for 2019.

Which sails have evolved most?

The Wavescape 2019 has been completely redesigned for 2019 with a Dacron luff panel and lighter materials. The 4-batten layout remains for 2019. The new 2019 versions have a softer feeling on the water without detracting from upper end stability.

Mouty Spindler

HARDCORE WAVE

"Sane in all circumstances," confirms the Planchemag 2018 Purelip test headline. A huge effective wind range sets the Purelip apart. 18 years of development has refined the Purelip concept of extreme response to trim variation. Balance, stability and ease of use in challenging conditions characterise the Purelip 2019. The Purelip is built to survive expression in hardcore surf. Upper end stability, on-the-wave neutrality, and durability are the Purelip strong suits, as verified by magazine test reports.

FEATURES & BENEFITS

- Light and tough: Integrated Panel Concept, 3-layer head/tack/clew radials extend into the all X-Ply body - ultimate resistance in heavy surf
- Super durable full IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Double dacron head panels - easy roll-up, durability, longevity
- Triple reinforced foot, leech and luff construction for maximised longevity of your rig
- Sizes 3.7 and up feature 5 battens, 3.4 and smaller feature 4 battens
- Loftsails full-opening mast pad design - easy access to your mast extension, downhaul system and batten trim key
- High visibility window: see the lip from your bottom turn
- Forward-profile batten systems with Loftsails exclusive Standing Battens at specific locations - responsive, low-end drive with easy upper end handling
- Dual clew eyelets with webbings - adjust leech release character to suit your sailing style and conditions
- Trim diamond - leech-release reference: dial into your sailing conditions
- RDM recommended, SDM compatible - both mast types fully compatible to maximise your windsurfing

MANOEUVRE WAVE 4-BATTEN

Down-the-line wave performance defined. The new Wavescape: like a wave riding extension of your own body! Completely redesigned for 2019 with Ramon and Diony, the new 4-batten Wavescape is lighter, softer, and is more neutral on the wave. The modified panel layout with Dacron mast panel provide soft, powerful and compact handling. With new panel layout and design concept, and full X-ply construction, the Wavescape 2019 offers the ultimate in soft wave mobility and expression.

FEATURES & BENEFITS

- Light and tough: Integrated Panel Concept (IPC); 3-layer head/tack/clew radials extend into the all X-Ply body - ultimate resistance in heavy surf
- Total X-Ply construction
- Super durable full IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Double Dacron head panels - easy roll-up, durability, longevity
- Triple-reinforced foot, leech and luff construction for maximised longevity of your rig
- High visibility window - see the lip from your bottom turn
- Loftsails full-opening mast pad design - easy access to your mastextension, downhaul system and batten trim key
- Forward-profile batten systems with Standing Battens at specific locations- responsive, low-end drive and easy upper end handling
- Dual clew eyelets with webbings - adjust leech-release character to suit your sailing conditions
- Trim diamond - leech-release reference: dial into your sailing conditions
- RDM recommended, SDM compatible - both mast types compatible to maximise your windsurfing experience

DEDICATED FREESTYLE SAIL

Loftsails' no-compromise, dedicated freestyle design 2013 agile, quick and reactive. The Airscape has been substantially redesigned for 2019 through work with Devis Paternina and Diony Guadagnino. Ultra light weight, the Airscape is all about free-expression: stable, easy to duck, explosive to pop... With rapid acceleration and feather light handling the Airscape goes neutral for the most acrobatic freestyle moves.

FEATURES & BENEFITS

- Unique, super durable full IYU250 4-part mast pocket - the perfect material between your mast and the elements
- 2 mil triax upper body panels - UV stable and weight reduction
- 4 mil biax window panels - durable visibility
- Triple foot and triple reinforced luff construction for maximized longevity
- RDM recommended, SDM compatible - both mast types fully compatible to maximise your windsurfing experience
- Forward-profile batten systems with Standing Battens at specific locations - for responsive, low-end drive and easy top-end handling
- Dual clew eyelets with webbing reinforcement - adjust leech release character to suit your sailing conditions
- Loftsails full-opening mast pad design... easy access to your mast extension, downhaul system and batten trim key
- Trim diamond - leech release reference: dial into your sailing conditions

DEDICATED FOIL SAIL

Windfoil dedication. Soft and effective pumping for low winds, and once up on the foil a light and easy feeling. The Skyscape has evolved for 2019: new profiles improve performance over the Skyscape 2018 model. A 5 batten, 3 cam design, the Skyscape is especially reactive to pumping while the cams provide foil stability.

FEATURES & BENEFITS

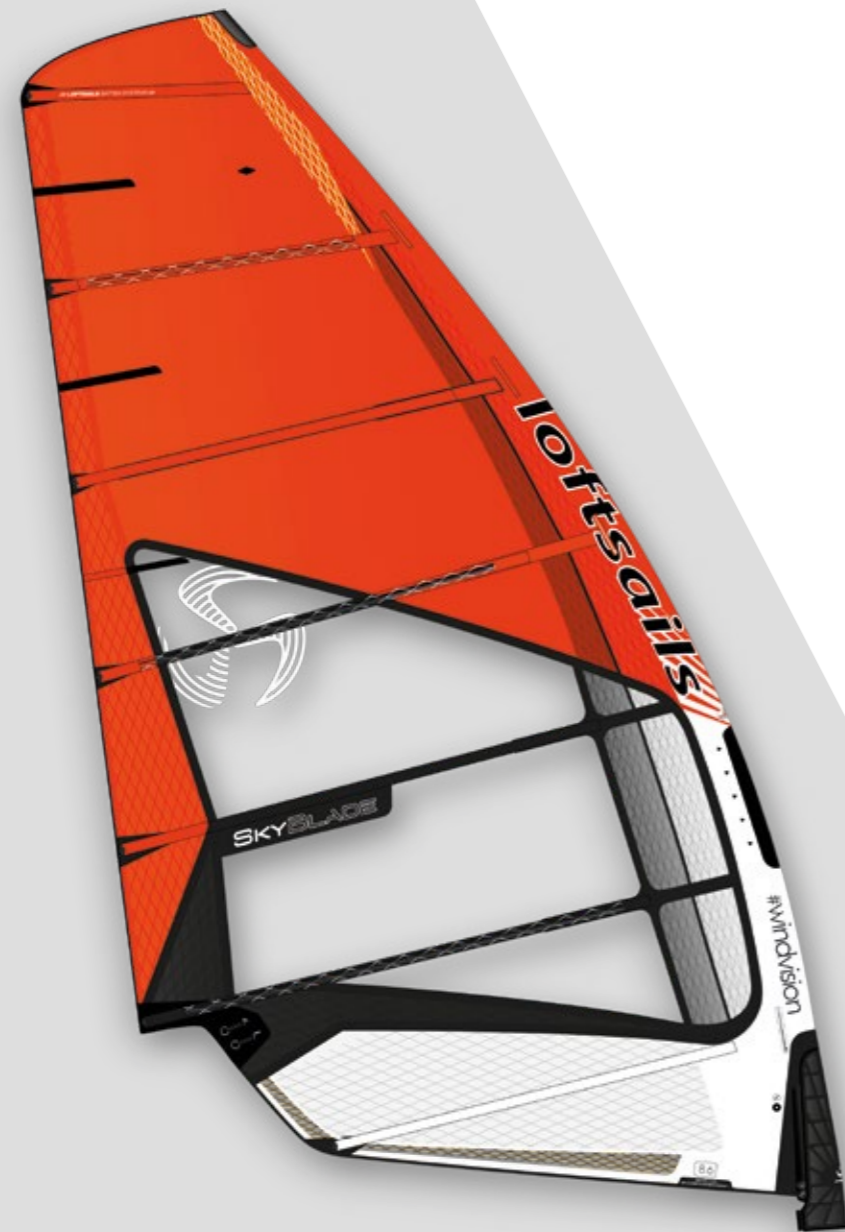

- Tekcam2 camber inducer design - easy rotation and gentle to your mast
- SDM and RDM mast compatibility. Tekcam2 Large (installed) and Reduced (in sail bag)
- Metallic cam interfaces - MCIs eliminate contact point degradation characteristic of cam designs without MCIs
- Tubed batten structure - solid stability for the upper end of the wind range
- X-ply batten pockets that alternate sail sides... using similar material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve for fast recovery
- Blade mast pocket construction - pocket sides under the tack pulley webbings for rotation ease, clean mast pocket and longevity
- Kevlar strip applications - profile definition, mast pocket stability and longevity
- Durable IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Trim diamond - leech release reference: dial into your sailing conditions

DEDICATED RACE COURSE FOIL SAIL

Windfoil race dedication: 7 battens, 4 cams, two sizes - 8.9 and 9.4. The Skyblade contrasts with the Racingblade in one important way: downforce. Greater downforce allows better control of foil lift.

FEATURES & BENEFITS

- Tekcam2 camber inducer design - easy rotation and gentle to your mast
- SDM and RDM mast compatibility. Tekcam2 Large (installed) and Reduced (in sailbag)
- Metallic cam interfaces - MCLs eliminate contact point degradation characteristic of cam designs without MCLs
- Tubed battens with varying carbon content. Top 3 specialized 100% carbon tubes - carbon tubes are lightweight and deliver superior stability for your upper end
- X-ply batten pockets that alternate sail sides... using similar material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve for fast recovery
- Blade mast pocket construction - pocket sides under the tack pulley webbings for rotation ease, clean mast pocket and longevity
- Kevlar strip applications - profile definition, mast pocket stability and longevity
- Durable IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Trim diamond - leech release reference: dial into your sailing conditions

NO-CAM FREERACE

The Oxygen is pure freeride: easy, accessible performance 18 years refined. The Oxygen has won magazine tests consistently since its inception as the O2 when the Loftsails brand began. 16 magazine test wins since 2005. The Oxygen: progressive slalom performance in an easy, cam-free package. Proven performance.

FEATURES & BENEFITS

- Blue: full X-Ply - 5 mil biaxial luff and foot panels, 4 mil biax window panels, 3.5 mil biax leech panels, 2 mil upper body panels
- Orange: 5 mil biaxial luff and foot panels, 5 mil mono window and 4 mil mono body panels
- Tubed batten systems - control in the upper end
- Dual clew eyelets with webbings - adjust leech release character to suit your sailing conditions
- Cross batten with leech extension batten and inset clew - connects the boom to the batten structure and promotes lower leech twist for upper-end ease
- Super durable full IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Double dacron head panels - easy roll-up, durability, longevity
- X-ply batten pockets that alternate sail sides - same material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry
- Sizes 7.8 and up 7 battens, 7.3 and down 6 battens
- Loftsails full-opening mast pad design - easy access to your mast extension, downhaul system and batten trim key
- Trim diamond - leech-release reference: dial into your sailing conditions

3-CAM PERFORMANCE FREERACE

New curves have been worked into the Switchblade 2019 to fundamentally improve performance over the successful 2018 design. Updated luff curves and modified vertical and horizontal shaping combine to take Switchblade performance a step further.

Renowned for having the widest range of its class, the Switchblade transforms from low-end powerhouse into a top-end racing weapon thanks to its broad tuning band. "Peak performance for all," declared the Planchemag 2018 Switchblade test headline.

FEATURES & BENEFITS

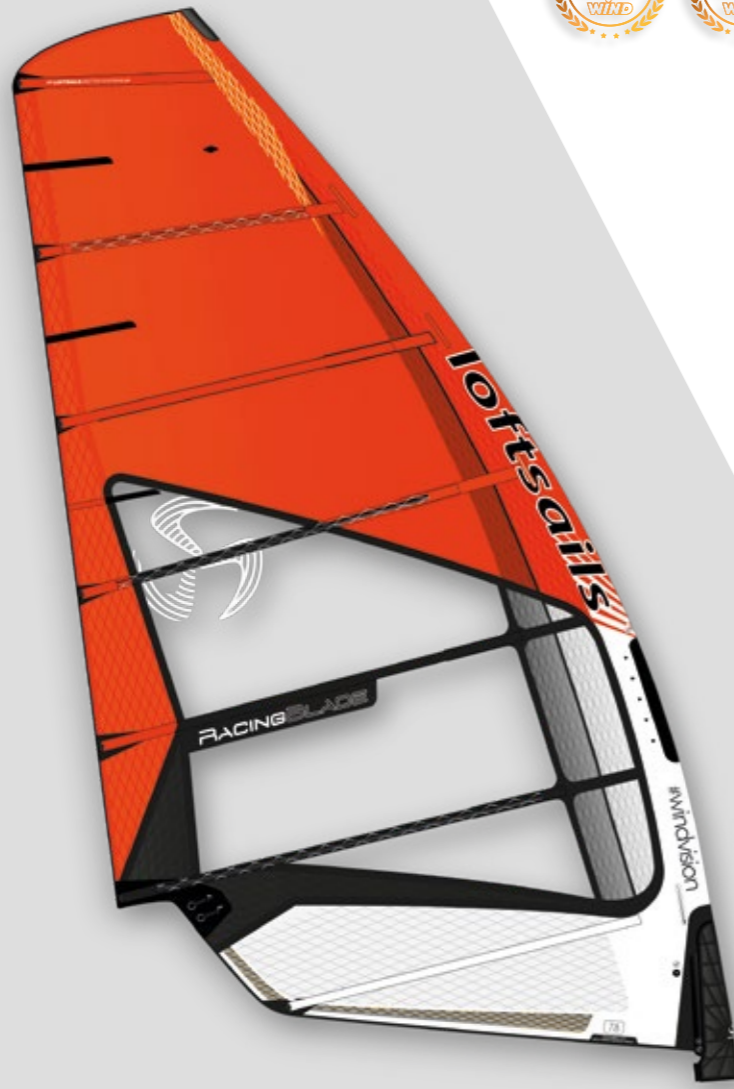

- Blue: full X-Ply... 5 mil biaxial luff and foot panels, 4 mil biax window panels, 3.5 mil biax leech panels, 2 mil upper body panels
- Orange: 5 mil biaxial luff and foot panels, 5 mil mono window and 4 mil mono body panels
- Tekcam2 camber inducer design - easy rotation and gentle to your mast
- SDM and RDM mast compatibility. Tekcam2 Large (installed) and Reduced (in sailbag) included with sizes 8.6 and down
- Metallic cam interfaces - MClS eliminate contact point degradation characteristic of cam designs without MClS
- Tubed batten structure - solid stability for the upper end
- X-ply batten pockets that alternate sail sides - using similar material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve for fast recovery
- Blade mast pocket construction - pocket sides under the tack pulley webbings for rotation ease, clean mast pocket and longevity
- Kevlar strip applications - profile definition, mast pocket stability and longevity
- Super durable full IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Trim diamond - leech release reference: dial into your sailing conditions

SLALOM UNLIMITED

Loftsails 2019 Racingblade is completely new in all respects: luff curve, vertical shape, horizontal shape, leech tuning, batten profiles... It represents a step beyond the Planchemag test winning 2018 design. The Racingblade 2019 provides ultra-complete slalom performance.

FEATURES & BENEFITS

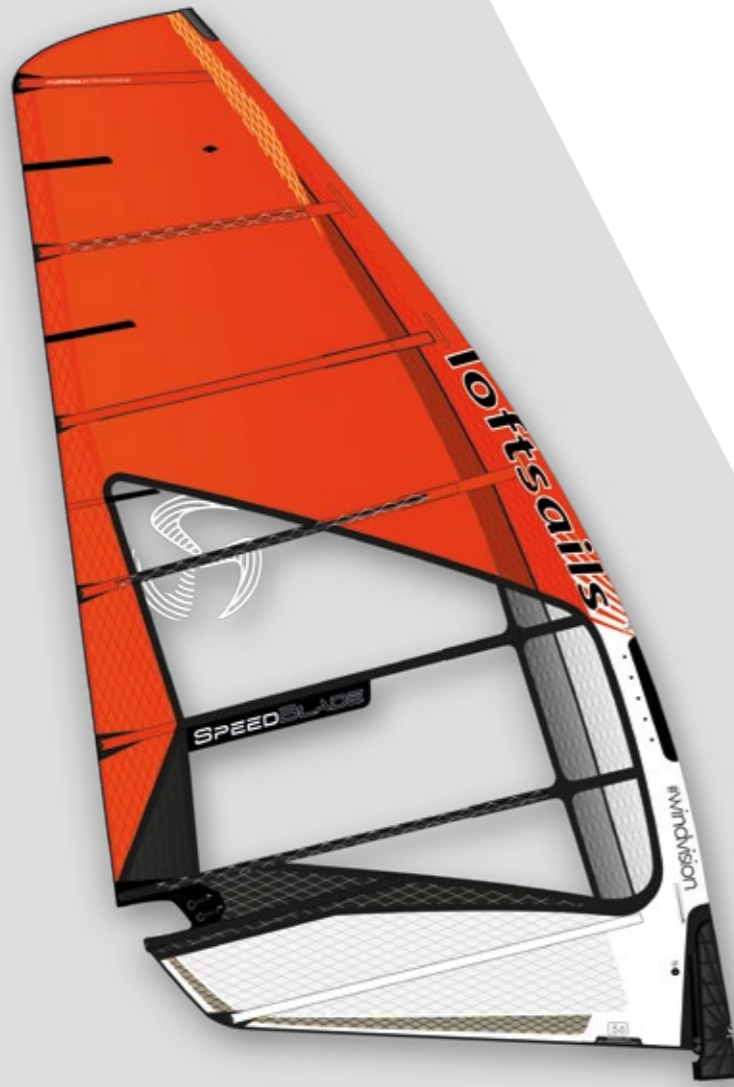

- Blade mast pocket construction features mast panel and 2 mil triax X-Ply mast pocket sides (3 layers) tensioned directly (all 3 layers under tack pulley webbings) - downhaul tension is equalized between the mast panel and the mast pocket resulting in the Racingblade's firm, clean, easy-rotating leading edge
- Internal vertical and horizontal Kevlar strip applications at cams - defines profile and augments stability
- Tubed battens with varying carbon content. Top 3 specialized 100% carbon tubes - carbon tubes are lightweight and deliver superior stability at the upper end
- Unique SDM and RDM mast compatibility. Tekcam2 Large (installed) and Reduced (in sail bag) included with size 8.6 and down
- Metallic cam interfaces - MCIs eliminate contact point degradation characteristic of cam designs without MCIs
- X-ply batten pockets that alternate sail sides - using similar material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Streamlined neoprene boom cutout with dual zippers - limits water entry into the mast sleeve, keeping the rig light for fast recoveries
- Tekcam2 camber inducer design - easy rotation and gentle to your mast
- Durable IYU250 4-part mast pocket - the perfect material between your mast and the elements
- 4 mil Dimension Polyant laminated monofilm upper body panels - proven superior performance
- Trim diamond - leech-release reference: dial into your sailing conditions

NO-COMPROMISE SPEEDSAILING

The Loftsails Speedblade: dedicated high-velocity designs that have broken the "50 knot barrier". Previous Loftsails Speedblades have won events such as the prestigious Luderitz Canal Challenge in Namibia. The Speedblades are developed with speedsailing legend Erik Beale: the Loftsails Speed Team and Speed Product Manager. Similar to the Racingblade in design concept, the Speedblade 2019 has one and a half more battens, a modified foot, and is tuned with more leech release. Suitable for high wind downwind courses typical for speed sailing.

FEATURES & BENEFITS

- Internal vertical and horizontal Kevlar strip applications at cams - defines profile and augments stability
- Blade mast pocket construction features mast panel and 2 mil triax X-Ply mast pocket sides (3 layers) tensioned directly (all 3 layers under tack pulley webbings) - downhaul tension is equalized between the mast panel and the mast pocket resulting in the Speedblade's firm, clean, easy-rotating leading edge
- 4 mil Dimension Polyant monofilm body panels - proven superior performance
- Tubed battens with varying carbon content. Top 3 specialized 100% carbon tubes - carbon tubes are lightweight and deliver superior stability for your upper end
- Unique SDM and RDM mast compatibility. Tekcam2 Large (installed) and Reduced (in sailbag) included with all sizes
- Metallic cam interfaces - MCIs eliminate contact point degradation characteristic of cam designs without MCIs
- X-ply batten pockets that alternate sail sides... using similar material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Neoprene boom cutout with dual zippers - the rig is streamlined for improved speeds
- RDM/SDM compatible - Both mast types fully compatible to maximize your windsurfing experience
- Super durable full IYU250 4-part mast pocket construction - the perfect material between your mast and the elements
- Trim diamond - leech-release reference: dial into your sailing conditions

FORMULA RACING MACHINE

The Loftsails BladeFR has a long and proven history in Formula racing: Dennis Littel's incredible ten successive titles, and Fernando Martinez's six Spanish Formula championships.

FEATURES & BENEFITS

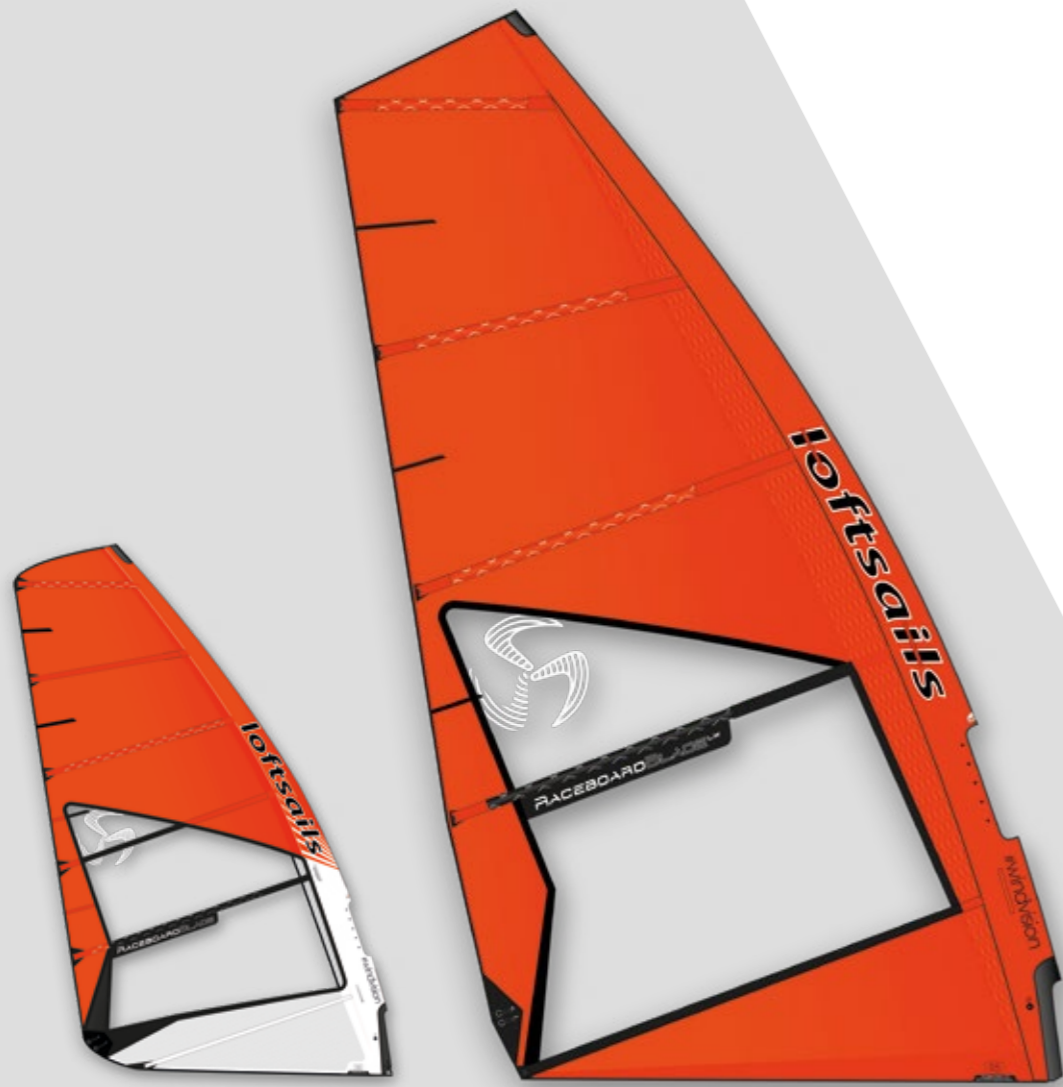

- Internal vertical and horizontal Kevlar strip applications at cams - defines profile and augments stability
- Blade mast pocket construction features mast panel and 2 mil triax X-Ply mast pocket sides (3 layers) tensioned directly (all 3 layers under tack pulley webbings) - downhaul tension is equalized between the mast panel and the mast pocket resulting in the BladeFR's firm, clean, easy-rotating leading edge
- Tubed battens with varying carbon content. Top 3 specialized 100% carbon tubes - carbon tubes are lightweight and deliver superior top-end stability
- Unique SDM and RDM mast compatibility. 'Tekcam2 Large' (installed) and 'Reduced' (in sail bag) included with all sizes
- Metallic Cam Interfaces - MCIs eliminate contact point degradation characteristic of cam designs without MCIs
- X-ply batten pockets that alternate sail sides - using similar material for the batten pocket as the body material minimises the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centred. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Neoprene boom cutout with dual zippers - the rig is streamlined for improved speeds
- RDM/SDM compatible - both mast types fully compatible to maximize your windsurfing experience
- 7 mil monofilm vertical internal panel (inside mast pocket) - profile stability
- Durable IYU250 4-part mast pocket - the perfect material between your mast and the elements
- Trim diamond - leech-release reference: dial into your sailing conditions

PURE RACEBOARD COMPETITION

Loftsails Raceboardblade 9.5 LW powers **Joao Rodrigues** to 2018 Raceboard World Championship victory, with **Curro Manchon** - also using a **Loftsails Raceboardblade 9.5 LW** - in second place! These latest results add to previous Raceboard blade World Championships victories for Fernando Martinez and Alex Buchau, proving again that Raceboardblade has the performance to lead the fleet!

Raceboard sails provide power and lift for course-racing longboard raceboards with centreboards. They are designed for upwind drive and extreme pointing ability in winds ranging from ultra light to a stiff breeze, and for full-planing downwind legs. The Loftsails Raceboardblade is a full-bodied, low-end power source with superb, streamlined and efficient trim reactivity at its top end. The 6-batten, 3-cam 9.5 is especially effective in medium to strong wind Raceboard competition.

FEATURES & BENEFITS

- Blade mast pocket construction features mast panel and mast pocket sides (3 layers) tensioned directly (all 3 layers under tack pulley webbings) - therefore downhaul tension is equalized between the mast panel and the mast pocket resulting in the Raceboard Blade's firm, clean, easy-rotating leading edge
- 4 mil Dimension Polyant monofilm body panels - proven superior performance
- Tubed battens with varying carbon content
- Metallic cam interfaces - MCLs eliminate contact point degradation
- Exposed tack (no mast pad) and boomhole, facilitating adjustable downhaul assemblies
- Xply batten pockets that alternate sail sides... using similar material for the batten pocket as the body material minimizes the asymmetric character of applied batten pockets. Pockets made with laminates allow the batten to be centered. These features combine to maintain rotation symmetry. In contrast, same-side dacron pockets promote asymmetrical rotation
- Trim diamond - leech-release reference: dial into your sailing conditions
- Durable IYU250 4-part mast pocket - the perfect material between your mast and the elements
- New tack strap with eyelet - strap tension independent from downhaul tension

MAST BAG

All Loftsails C75 and Team Edition (C100) mast are supplied with protective mast bags as you would expect with a premium product.

The Spark C50 line is targeted at offering value for money at competitive price points and therefore mast bags are available and priced separately to fit these items on demand.

VISION C75 RDM

Loftsails Vision 75% carbon range deliver high-end response and reaction for performance freeriders, freerace and wavesailing use in a durable pre-preg construction package that's tough and strong for either camber wear or punishment in the surf.

Loftsails reliable, precision manufacturing methods ensure consistent quality that reduces production variance tolerance considerably so that the intended behavior of the masts is assured.

SPARK C50 RDM

Loftsails quality pre-preg construction methods make the 50% Carbon Spark more than an entry-level mast, with reaction and performance comparable to many higher carbon-content mast models and solid construction for peace of mind.

Excellent choice with super longevity for general freeride blasting and progression and great value for money. (All Loftsails masts are Constant Curve.)

TEAM EDITION C100 RDM

Loftsails Team Edition masts are focused on achieving the best possible response for the least possible weight, without compromising durability. In high-performance sails, reaction and reflex are critical and having that pre-set, intended behavior pre-set and consistently replicated in all diameters and sizes of the mast program is the number one requirement in complementing their test-winning sails. Using the best possible T700 and T800 carbon fibers and pre-preg (pre-impregnated with resin for the best possible quality vs. traditional wet layup processes) methods, Loftsails autoclave-cured process delivers the highest standard of tensile strength, impact/friction protection and responsive flex available - all from a bespoke, dedicated program - unlike many brands that rely on off-the-shelf OEM products alone.
